DEXcam™ 3

Direct-USB Intra-oral Video Camera

As a leading provider of digital diagnostic imaging solutions, DEXIS® is pleased to offer DEXcam 3, a direct-USB intra-oral video camera that supports clinical diagnostics as well as providing an excellent tool for patient education and communication.

DEXcam 3 features a seven-element glass optical lens, four bright LEDs and an internal prism that provide optimal lighting and a Sony® CCD sensor for sharp, high-definition image quality.

Camera controls are conveniently located on the lightweight handpiece. Freeze images with a simple press of a button, then save the image into the patient record with a two-second press.

High quality imaging

- Live video display with freeze and capture capabilities
- Precision-ground glass optics virtually eliminate image distortion
- Slide switch focus mechanism allows viewing both intra-oral images (capture up to three teeth) and extra-oral images (smile, arch, and portrait) without a lens change
- State-of-the-art 4-LED lighting system

Ultra-portable

- High-speed direct-USB connection makes docking stations unnecessary
- Disconnects effortlessly for quick transfer to another operatory
- Capture control capability directly on the lightweight, easy-to-hold handpiece

Easy access

- Camera auto-activation and deactivation controlled by placement in holster
- Holster can be mounted almost anywhere so it's always within reach

DEXvideo™ Software

The DEXvideo intra-oral camera acquisition software takes DEXcam 3 ease of use to the next level. Simply removing the camera from its holster auto-activates live video streaming. This convenient feature maximizes efficiency and reduces time spent interacting with the computer. DEXvideo also lets you capture, crop, rotate and store images in a simple and intuitive way.
