Get closer with DocPortMacro

The advanced DocPortMacro incorporates focus-free camera technology to easily acquire exceptionally crisp images with every use. A fingertip activated macro-zoom button strategically located on the handpiece enables users to spontaneously switch in and out of the macro viewing mode anytime a closer, near-microscopic view is desired.

DocportMacro is available in three feature-rich models to bring every practice closer to perfection in patient communication and case acceptance.

Finally, a Quality USB Camera

The compact DocPortMacro-U produces the best direct USB intraoral images available today! We've made it our top priority to ensure that our analog **and** digital USB camera models produce extraordinary images. Don't be disappointed with your digital intraoral camera solution – insist on DocPortMacro-U!

The DocPortMacro-L is an analog video model designed for practices that already have video capture cards installed in their computers. When upgrading or adding cameras within an existing computerized environment or when USB 2.0 is not available, DocPortMacro-L is a great option.

DocPortMacro LED Intraoral Camera
