Opti^{Plus} Intraoral Camera & CDMi Imaging Software

CamSight's Opti^{Plus} Intraoral Camera equipped with bright LED light and features CCD technology for excellent imaging performance and delivery of the highest quality images to the screen. With its sleek design, Opti^{Plus} is highly maneuverable while its user-friendly approach and large depth of field make it practical and easy-to-use.

Opti^{Plus} Intraoral Camera connects directly to a computer USB port via USB cable, eliminating the need of docking station and make it far portable. Now, all you have to carry is the camera handpiece in your pocket from operatory to operatory.

The Opti^{Plus} is capable of supporting the needs of any size dental practice and is available in different system packages; it can be used with dentists' existing imaging software or can be purchased as a kit with signature CDMi Intraoral Imaging Software.

Intraoral Imaging Software

Multi-View

Case Presentation

Patient Education

Library

CDMi Intraoral Imaging Software is one of the most user-friendly imaging software programs providing dentists with complete intraoral imaging capabilities and electronic storage for viewing intraoral images easily from any operatory.

This signature software includes Screen Capture, Image Enhancement, Multi-View, and Case Presentation features that allow dentists to increase their case acceptance rate higher as communicating better with patients.

CDMi Intraoral Imaging Software is also compatible with most existing intraoral cameras that dentists have in their operatories.
