SuniCamII
INTRAORAL CAMERA

Crystal Clear Images

Easy Image Capture

Free Focus
(fully automatic)

Distortion Free

Easy Access

suni
MEDICAL IMAGING INC

With its crystal clear images and contoured shape, SuniCam II is the perfect diagnostic partner for early clinical detection and patient education. Its ergonomic design, ideal size and light weight make SuniCam II a comfortable fit for both clinician and patient, and it's easily portable between operatories. SuniCam II makes image capture a snap, with its luminous LED lighting system, free-focus (fully automatic) and aspheric lens you can count on a distortion free image every time. The camera's 105° angle of view provides increased access to hard to reach areas of the mouth. The perfect balance between functionality and features, SuniCam II is the right fit for your practice.

SuniCamII
INTRAORAL CAMERA

The most balanced intraoral camera in the world.

Quality of Images

No distortion – just picture perfect images every time.

The most impressive feature of SuniCam II is the crystal clear images it delivers to your chairside monitor. Equipped with an aspheric lens to eliminate distortion, SuniCam II focuses automatically to provide a uniform, high-quality image every time. With SuniCam II you can instantly freeze frame a perfect image on screen by simply gliding over the SuniTouch. And with the latest generation LED lighting, images are always luminous, crisp and detailed.

Easy to Work With

With all of the right features, SuniCam II is the perfect balance.

SuniCam II has been crafted to fit your practice perfectly. Its curved design and light weight improves ergonomics, and its rounded, compact camera head maximizes patient comfort. Its large depth of field allows you to capture a patient's portrait or the details of a single tooth. And with SuniTouch, there's no button tapping that has the potential to produce a blurry image – simply glide your finger across SuniTouch and your crystal clear image is captured. SuniCam II fully integrates with Prof. Suni or Dr. Suni software and like all of Suni's products, is compatible with most imaging software.

The Right Angle of Lens

The right angle makes for an easy to achieve, accurate diagnosis.

SuniCam II's 105° angle of view separates it from other cameras that only provide a 90° angle. This increased angle allows better exploration of posterior areas of the mouth to ensure you the most thorough and accurate diagnosis. And – seeing what you see – your patients will become your partners in their oral health care and treatment planning.
