SAPANA WIRELESS CAMERA

High Resolution

1.36-Megapixel CCD. Super high quality CCD developed for intraoral images, produce more realistic color, higher resolution, and more natural gradation sequence.

Processor. New SX630 data processor was specially developed for intraoral images. It processes the image data from CCD sensor to deliver more smooth, low noise images with realistic color.

Simple Operation

Finger Tip Operation- Instant Capture >>> Slideshow
High quality images can be instantly captured and stored in the camera by single click on the freeze button. Slide the button to review with your patients.

On Board Memory. It holds 16 images in its on board memory for instant review.

White LED Light. The LED lights maintain the brightness and original realistic colors for more clear and accurate intraoral images. The LED lights do not require bulb replacement and it reduces the maintenance cost in your office.

Image Clarity

Auto Focus. No manual focusing is required. The camera instantly adjusts focus from an arch to one tooth.

Anti-Fogging Lens. The 0.02-inch pin lens solves the problem of condensation, which occurs when patient's breath makes contact with the lens.

Specifications

Length:	10.2"
