Specifications

Instant set-up in 10 seconds.
Just plug it into your TV.

STEP1 : Install 4 AAA batteries in the camera.
STEP2 : Plug the video cable into the video jack of your TV.
STEP3 : Instantly display the image on your TV.

Specifications

- Digital Image Processing
- White LED Lamp x2
- 405nm LED x2
- Output Video Cable (3.5 ft.)
- Battery Operated
- Dimensions (W/D/H) : 217 x 30 x 26 (mm) / 8.5 x 1.2 x 1 (inch)
- Weight: 100g / 3.5oz (Main Unit)
- Option: Macro Lens Cap

In First Impressions,
Dr. George Freedman, DDS, FAACD, FACD, gives readers a brief summary of products that have recently been introduced to dentistry, based on his clinical experience.

Education is the key to good oral health. That is one good maxim. Another is Seeing is believing. We have known for years how effective intraoral cameras can be in terms of getting patients to improve both their oral health and their awareness. In fact, many of us, probably more than 40% of all dentists in North America, have intraoral cameras in our practice to demonstrate to our patient exactly where the problems are and what the solutions can be. Many have labeled the intraoral camera the best educator (and treatment motivator) in dentistry. The only excuse for not having intraoral practice has been issue of cost. RF SYSTEM lab. has now introduced the ultimate low-cost intraoral camera. At the regular price of $298, this is an intraoral camera that is primarily designed for patient at-home use. Patients can see how effectively they or their children are brushing

their teeth and where stains or calculus are building up. Our patients can also co-diagnose early decay or other problems in the oral cavity. While the RF SYSTEM lab. Home Use Intraoral Camera (Figure 3) doesn't have the same quality as professional models, it is an excellent solution for patients show wish to become more involved in their own dental care. This intraoral camera is also great for satellite clinics, mobile dental practices, and in secondary and tertiary treatment rooms. It does require connection to a monitor or television screen for viewing and doesn't have the bells and whistles of the professional-use intraoral camera. It is definitely an asset to every patient and very much an asset to every dentist. At this price, how can you refuse?
